

FLS-Liquid

Product data sheet

Why do your flocks benefit from Farm-O-San FLS Liquid?

Fatty Liver Syndrome occurs in laying hens and breeders mainly around peak production and halfway the laying cycle. It can result in a significant drop in egg production, have a negative impact on egg shell quality, and cause mortality.

Farm-O-San® FLS Liquid is a dietetic feed that is a ready to use product for application in drinking water. Farm-O-San FLS Liquid can support laying hen production levels by reducing the risk of Fatty Liver Syndrome. It can be used during periods of anticipated risk before symptoms of Fatty Liver Syndrome occur. It contains Poly Unsaturated Fatty Acids as an alternative source of energy that may reduce the conversion of carbohydrates to fatty acids in the liver, a number of vitamins that support liver function and vitamin E and selenium, which have antioxidant activity.

General information

Type of feed:	Dietitic feed for poultry
Packaging:	Can containing 5 litres
Shelf life:	12 months
